timeless style and simplicity that works
for every room in your home

Weathermaster[®]

Sunscreen & Rollershades

Screen the sun, filter the light or create darkness

Weathermaster® Rollershades can be whatever you need them to be. It means you can unify your home with one style of window covering, yet every room can receive the individual treatment it requires. And because rollershades are sleek and simple, they can complement almost any interior theme.

Beautiful simplicity, exceptional functionality

Interior designers love rollershades. Their simple elegance is compatible with almost any type of interior, helping to create the perfect backdrop for art and furniture. They also support end-to-end design unity, because it's easy to specify exactly the right kind of shade for every room.

Homeowners love rollershades too. They do a fantastic job of screening, filtering or blocking out the light. They also deliver exceptional value for money over their lifetime, because their simple styling means they don't have to be replaced when new decorating trends come along - especially if you select a neutral shade and classic texture.

Benefits

- Simple yet elegant
- Compatible with many different decorating styles
- Lower cost
- Wide range of blockout, sunscreen and sun filtering fabrics
- Easy to automate

For living areas

Whether your living areas need sun shading or privacy – or maybe both – Weathermaster® Rollershades can deliver. We have linked systems for spanning extra-wide windows and doors; a special clutch mechanism that makes it easy to raise large shades; and twin-bracket systems for dual shades (light filtering and blackout, for example). Every year new fabrics join our unrivalled collection, so you can be certain of finding the right colour and texture.

For bedrooms

You enjoy a better night's sleep when your window coverings don't leak light around the edges. With Weathermaster Rollershades in blackout fabric, installed with side channels to ensure a snug fit, your sleeping space can stay dark until it's time to wake. Twin bracket systems offer the convenience of a sunscreen or light filtering rollershade for daytime and a blackout for night time. If there are dust mite allergies in your family, sanitized fabrics are available.

For kitchens and bathrooms

Kitchens often need sunscreening during the day and blackout at night. Bathrooms require light filtering that also provides privacy. And both environments benefit from window coverings treated with Duraguard®, a stain repellent. Weathermaster Rollershades can tick all the boxes.

For hard-to-reach windows

If you have an atrium or foyer window that's way beyond your reach, an automated rollershade is an ideal child safe solution.

Your choices

Fabrics

Blockout	Choose a blockout fabric if you want darkness and privacy in bedroom and living areas. Available in a range of monochromatic shades and contemporary textures.	The latest trends and choices of colour and textures. Contact your Weathermaster® dealer to see swatches from the latest collections.
Light filtering	A smart choice if you want light and privacy at the same time. Light filtering fabrics are available in a range of opacities, colours and textures.	
Sunscreen	Sunscreens shade the sun, while also offering a certain level of daytime privacy. With some sunscreen fabrics you can still see the view.	

Finishing

Two shades in one (twin bracket)

The Weathermaster twin bracket allows you to combine the functionality of two different rollershades in one window, so you can have daytime screening or filtering and night-time darkness.

Bottom rail

The bottom rail of Weathermaster Rollershades is a design feature that you can tailor to your tastes. There's a choice of three shapes (shown below) and eight colours - White, Black, Ivory, Pearl Bronze, Anodised Silver, Dune, Bone* and Barley*.

Headbox and fascia

For shades that are fitted either above window frames, or inside the reveal, a sleek headbox or matching fascia system can be used to conceal the roller and mechanism. Colour choices include anodised silver or powder-coat in white, black or magnolia. For rooms that require total blackout, the headbox system can be installed with side channels.

Strata

Round

Elliptical

*Bone and Barley available in Strata and Elliptical only.

Operating systems

Manual operation

Manual control options include the classic standard chain drive or a chainless spring motor.

Automation

Weathermaster Rollershades can be automated, so you can raise or lower your window coverings with the touch of a button. There are two ways to do this:

- Traditional hard-wired automation with a remote control or wall switch.
- Q-motion wireless automation, which uses ordinary 'D' batteries within the roller tube. Shades can be raised and lowered using a remote control or with an iPhone or iPad application.

Child safety

Child safety is a critical issue that we have addressed with specific safety devices, such as child safe tensioner devices to eliminate the risk of strangulation on cords. Please talk to your Weathermaster consultant about ways to make rollershades safe for young children.
